Cannabis Data Science #57

March 16th, 2022

A Brief History of Data Exploration

Sir Francis Galton opened an anthropometric laboratory to

“show the public the simplicity of the instruments and methods by which the chief physical characteristics of man may be measured and recorded.”

Sir Francis Galton (1822 – 1911) in the 1850s.

- Founded the biometric approach to the study of

What Data Science Brings to the Table

Measurements vary.

Question of the day

- What insights does our data hold that we may not know?

Weekly Evening Meeting By Francis Galton On Men of Science, their Nature and their Nurture

- Not tied down to old courses of classics and mathematics.
- Sufficient groundwork in many subjects to avoid error.
- Early introduced to many subjects of interest.
- A well-balanced education, including chemistry, botany, logic, and political economy.
- A variety of subjects, and attention to details.
- Coming in contact with persons of every rank and sitting in the same form.

Thank you for coming.

Lesson of the Day

- Exploring your data is an critical, yet often overlooked, step in gleaming insights.
